Local Network Security Company Makes Alleviating the Problem of Spam or
Junk E-Mail a Much Easier Task

Stamford, CT, February 14, 2005 - Spam is not only flooding everyone's inbox it is also a nuisance and a network security threat. Spam cost employees valuable time during the day and Spam is more likely to contain a network virus that has the potential to cost a company hundreds of thousands of dollars in down time. The government has made attempts to cut Spam by threatening legal action. Unfortunately, these legal actions have had little effect because there are many ways to spoof Spam making it difficult to derive the e-mails original origin. There are many solutions to this problem, but selecting and installing the proper solution is growing more difficult by the day for local companies. Software based, black box, hosted, and hybrid are all different Spam solution alternatives. A solution that will produce the least administrative burden and end user headaches is the ultimate goal of an information technology executive or business owner.

Hi-Link Computer Corporation is a leading Spam and security solution provider located in Stamford, CT. The key to its success is working closely with the client and diagnosing the many variables that must be considered when selecting the

appropriate Spam solution. Some of these variables include how many users the company has, the maximum amount of false positives (a legitimate e-mail that is blocked by a Spam filter) and false negatives (the Spam is not blocked by the filter and gets through to the end users inbox) that is acceptable to a company, the amount of e-mail the company wants to quarantine and save on a server, and if the company has a dedicated server to run Spam software or a black box solution might be a better fit.

After evaluating all of these variables then a proper Spam product solution can be put in place. A few of the leading anti-Spam manufacturers include:

Symantec, Trend Micro, McAfee, Fortinet, and Barracuda. Each one of these products offers unique benefits to the end user and each one often has evaluation products available for a company to test for around 30 days. Spam may seem like a difficult problem, but with the proper local guidance it can be solved with very little administrative burden and in the long run will show a return on investment by allowing the companies' employees to be more productive.

A free Spam solution comparison booklet is also available by e-mailing your name and address to [HYPERLINK "mailto:info@hi-link.com" info@hi-link.com](mailto:info@hi-link.com).

Company Overview

Hi-Link Computer Corp. is an Information Technology solutions provider that specializes in helping its clients build a network infrastructure to make their businesses more efficient. Hi-Link has been servicing the Tri-State area with its unique customer-focused solutions since 1990.

Hi-Link provides three primary solutions: Network Security, Wireless Networking,

and IP Communications. Within each one of these areas of expertise Hi-Link offers numerous focal points: Remote access (including VPN and SSL), two-factor authentication, anti-virus, anti-SPAM, IDS/IPS, endpoint security, backup/storage solutions, content filtering, security assessments, wireless site surveys, IP phone design, and complete installations.

Hi-Link is backed by industry certifications and partnerships to achieve all of these solutions. A few of its more prestigious certifications from Cisco include: Security, Routing and Switching, Wireless, and IP Communications. Hi-Link also holds numerous certifications from: Microsoft, Hewlett Packard, Citrix, and Veritas; as well as maintaining all of the necessary qualifications that are required to be partners with companies such as: Symantec, Fortinet, RSA, APC, Zone Labs, and Barracuda.
