Hi-Link's VMware Virtualization Health Check Service

Our VMware Professional Services experts examine your vSphere environment. Consultants will validate technical consistencies, examine the use of good practices, and identify areas of concern, particularly with regard to upgrading the vSphere environment.

As a part of the health report, you will receive an assessment summary based on the VMware Health Analyzer checkpoints:

Best for Companies that:
Have an existing VMware vSphere platform and want to optimize the existing instance or extend the benefits to other areas of their infrastructure.

Key Activities:
• Pre-engagement planning and discussion of project timelines, scheduling, and logistics.

• Architecture and operations review: identify areas where infrastructure does not meet industry standards.

• Technical audit and analysis: Including a review session to recommend improvements.

• Install and run VMware Health Analyzer and review results.

• Discuss upgrades, new approaches, and functionality to consider for the future virtual infrastructure.

Outcome:
An optimized vSphere environment with maximized resources because of increased efficiencies while creating a roadmap for the future.

Benefits:
• Optimize VMware vSphere performance by verifying technical consistency and examining the use of best practices.

• Maximize resources through virtualization efficiencies and identify a roadmap for future improvements.

• Reduce risk by leveraging experienced consultants and proven best practices and identify gaps in current practices and target improvement areas.

Hi-Link Technology Group is a full-service information technology consulting firm and managed service provided that implements and maintains high-performance IT systems for organizations in a wide range of industries.
